About Community Planning

Community planning is a process that requires the local authority and other organisations to come together to agree priorities for the planning and provision of public services with the community. The two main aims of Community Planning are to:

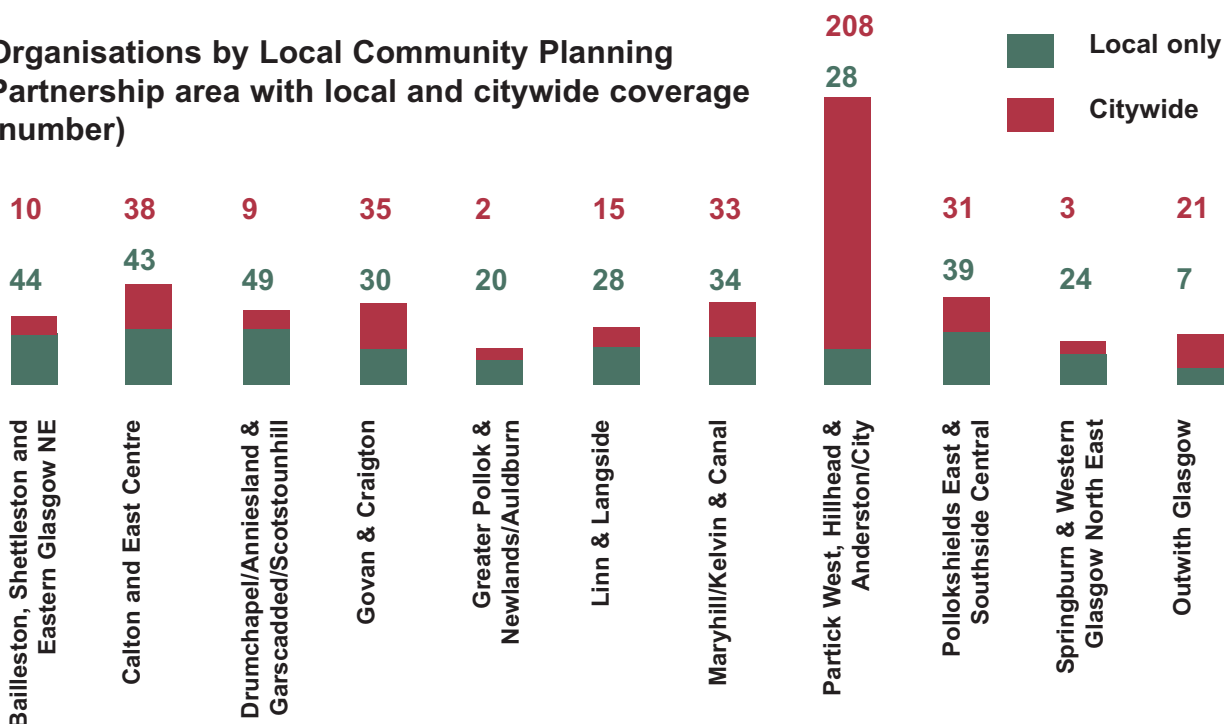

- Ensure that people and communities are genuinely engaged in the decisions made on public services which affect them
- Ensure commitment from organisations to work together, not apart, in providing better public services

To achieve these objectives community planning will be required to build the capacity of communities. Community planning aims to create a culture shift so that decisions on services are subject to discussion with local people and other service delivery partners as a matter of course. Over time organisations working together will become the norm.
